HEMEROCALLIS - DAYLILIES

Here you will find listed some of the worlds best perennials. As we have repeated every year since we began listing daylilies, "Daylilies are one plant that should be in everyone's garden". It has been quite amazing the popularity they have gathered.

They bloom from spring 'till frost. More bloom scapes are produced and the flowers are larger as each year passes. Making them "permanent beauty in your garden". No pests or diseases seem to bother them, for they go right on blooming year in and year out even with neglect. Of course the more care and water you give them the more they will reward you. Most all varieties listed are hardy from Canada southward. So make it a point this year to plant a little corner of your garden with them. We know you won't be disappointed.

And now a few tips on planting and caring for your daylilies you will order this year:

1. The time to plant is NOW. The sooner you plant the sooner you will have bloom.
2. Plant in any good garden soil with the root-leaf union about 1 inch under ground, being careful to spread the roots out.
3. Water well to settle several times, and weekly thereafter.
4. Never use a fertilizer high in nitrogen for all it will do is promote a lot of leaf growth and little bloom. A good rule to follow on fertilizing is to use a little often instead a lot several times a year.
5. Plant in full sun and if you have some darker shades put them where they get just a little shade for this tends to make the colors deeper and brighter.

The divisions we send out are large and heavy. In all instances when stock permits they will be double or better. WE SEND DAY-LILIES ANY TIME OF THE YEAR WHEN OUR WEATHER PERMITS DIGGING.

ONCOBREDS

In this section you will find one of the most interesting types of bearded iris grown today. All of them are descendents of iris that come from in and around the Holy Land. As a rule it is quite hard to grow these native species, but thanks to our modern day hybridizers who have crossed and recrossed these natives with our regular bearded iris which grow so well; we have now plants which grow quite easy and have flowers that look a great deal like the wild species. As a rule most of these listed are quite hardy in the open, but some will need a little protection in the coldest areas. In all cases we will advise you when you order a tender variety. So this year if you do not grow any of these listed order a couple and tuck them in somewhere. You won't regret it.

TABLE INTERMEDIATE AND FALL BLOOMING IRIS

We find a growing interest in these shorter and smaller cousins to the tall bearded varieties. This year we are again listing the Tables, Intermediates, and Fall Bloomers together. The shorter bloom stalks and smaller blossoms make them ideal for arrangements and also stand up to the weather better. Most all listed will grow quite fast and produce quite a large clump the first year.
